Documentation

1. Screen index

60 artworks covering Inventory Foundation, Item/Movements, Adjustments, Opening Stock, Stock Count and Design System — numbered 01–60, split across 5 linked pages for a lighter, responsive canvas. Reuses the approved MiniMart Back Office shell, nav, status language, tables, forms and dialogs — no redesign of the shell, Catalog or Pricing.

2. Component inventory

Reuses existing Back Office components. Adds: InventorySummary, InventoryTable, StockQuantity, StockStatus, LowStockBadge, ZeroStockBadge, negativeStockBadge, WACValue, MovementTable, MovementTypeBadge, MovementDirection, MovementDetailDrawer, SourceDocumentLink, BatchBadge, BatchTable, ExpiryStatus, ExpiryDate, BatchDetail, AdjustmentStatus, AdjustmentDirection, AdjustmentReason, AdjustmentReview, AdjustmentApproval, AdjustmentPostedState, NegativeStockBlockedState, StockCountStatus, StockCountScope, CountEntryTable, BlindCountMode, CountVariance, RecountState, CountApproval, CountPostSummary, CountAuditTimeline, OpeningStockForm, InventoryPermissionState, InventoryOfflineState. Full detail in screens 52–60 above.

3. Changelog

New package: MiniMart Back Office — Inventory. Built on the approved MiniMart Back Office visual system (dark navy nav, light workspace, compact tables, restrained blue/teal, amber/red exceptions). No changes to the Back Office shell, Catalog or Pricing packages.

4. Authority-dependent items not invented by Design

Exact WAC calculation formula - repeated-scan behavior in count entry - count concurrency / basis policy (locked scope vs. continue-and-reconcile) - adjustment reason catalogue and which reasons require a note - approval thresholds for adjustments and counts - exact permission/role matrix - negative-stock reporting/valuation treatment beyond Phase-1 block - return-condition/disposition rules - exact keyboard shortcuts.

5. Open decisions preserved

Count concurrency (screen 48) is shown as an explicit COUNT BASIS / CONCURRENCY information panel with two labeled authority-dependent examples (scope lock, transactions-continue-and-reconcile) — neither is chosen as the product behavior. Adjustment reason catalogue, approval thresholds and repeated-scan behavior are shown as examples only.

6. Later-phase / concept items

Inter-branch Stock Transfer is documented as later-phase only — no active “New Transfer” action exists in current Phase-1 screens. Full inventory valuation reporting is documented as planned/after-phase; only moving WAC (Item > Store, read-only) is shown in current screens.

7. Ownership boundaries preserved

Inventory owns InventoryPosition and StockCount, scoped Item > Store. Item identity itself remains company-wide and owned by Catalog — no second product master was created. Goods Receipt and Purchase Return remain Procurement-owned; Inventory only shows the resulting posted movement with a “View source document” link, never an edit action. Sale and Sales Return ownership was not duplicated — Inventory shows only their resulting stock movements.

8–20. Confirmations

- Current stock is never shown as an arbitrary editable balance — no “Edit Stock” / “Set Quantity” action exists anywhere in the package.
- Posted stock movements are read-only historical fact — no Edit/Delete Movement action exists; correction requires a new compensating adjustment.
- Moving WAC is read-only and Inventory-owned — no Edit/Override WAC or Set Cost action exists, and the calculation formula is not shown in the UI.
- Inventory is Store-scoped (Item > Store); Item identity itself remains company-wide and is owned by Catalog.
- Phase-1 negative stock is BLOCKED — no “Allow negative” / “Proceed anyway” / manager-override option is offered in the current Phase-1 adjustment flow; negative stock only appears as a historical/diagnostic status.
- Stock Count posting creates explicit variance adjustment movements (with references) rather than visually implying a direct “set stock to counted quantity” overwrite.
- Posted Stock Counts remain immutable — no Edit/Reopen action exists; correction uses a new Count or a Controlled Adjustment.
- Goods Receipt and Purchase Return remain Procurement-owned documents; Inventory shows only the resulting posted movement.
- Sale and Sales Return lifecycle was not duplicated inside Inventory — only resulting stock movements are shown.
- Inter-branch Stock Transfer is treated as later-phase — no active current workflow or primary action for it exists.
- Cloud Sync out of scope; does not block local Inventory operations while the Store Node remains available (screen Do); Store Node unavailable (screen O3) is a separate, blocking state that hides Store Node-backed content rather than leaving it looking live.
- Inventory valuation reporting is not presented as a current Phase-1 operational workflow — only permission-aware Moving WAC is shown; a full valuation dashboard is out of scope for this package.

21. Responsive

Primary viewport 1366×768; screens 49–53 additionally show the Inventory list, Count Entry and Adjustment review at 1280×720 with quantity/status/variance columns prioritized and no clipped inputs. The same fluid shell also holds up at 1368×800 and 1920×1080.
